

Villamosmérnöki és Informatikai Kar Méréstechnika és Információs Rendszerek Tanszék

Önálló laboratórium

Pingpong labda lokalizációja rezgésjelek alapján

Készítette: Gungl Szilárd Konzulens: Orosz György

A feladat egyszerű

- Tájékozódó mérések
- Detektáló algoritmus kiválasztása
- A rendszer felépítése

Alapötlet:

Valóban egyszerű...?

A detektált pattanás idődiagramja

Ugyanazon jel első 10 ms-a

Ugyanazon jel első 10 ms-a

10 centiméterrel távolabbi pattanás jele

Keresztkorreláció...?

Az egyes módusok visszaverődnek és egymással interferálnak

Wave Modes in Different Geometries

- In infinite media there are only two types of waves: dilatational (P) and distortional (S).
- Semi-infinite media there are also Rayleigh and Lateral (Head) waves. Head waves produced by interaction of longitudinal wave with free surface.
- In double bounded media like plates there are also Lamb waves.

Symmetric

Antisymmetric

In thinnest plates only Lamb wave arrivals are visible.

Fázis- és csoportsebesség

Fázis- és csoportsebesség

A mérési elrendezés:

Tesztelt módszerek

- Trigger szint
- Első lokális maximum, mely meghalad egy bizonyos szintet
- Burkoló
- Energia eloszlás
- (... szimmetrikus, aszimmetrikus komponens szerinti detektálás)

További problémák

Merevítésen és arra merőlegesen, azonos távolságra mérve:

Energia eloszlás:

Parabola:

Trigger:

Első lokális maximum:

Energia eloszlás:

Parabola:

Trigger:

Első lokális maximum:

További munka

- Egyéb módszerek tesztelése
- Rendszer felépítése

Köszönöm a figyelmet!
